

ESSMANN solutions for safe flat roofs

From its beginnings as a business manufacturing chipboard for use in loft conversions, ESSMANN GmbH has grown into an international company. ESSMANN gained recognition through its targeted use of skylight domes and arcade rooflights to channel daylight into factories and offices in a cost-effective manner. Nowadays, the issue of light, air and safety on flat roofs has become an extremely complex one. ESSMANN GmbH develops, plans and produces flat roof and facade systems for lighting, aerating and ventilating, and extracting smoke and heat from buildings. These ranges of products are enhanced by targeted drainage systems.

ESSMANN views all its customers, be they property developers, architects, roofers, specialist roofing dealers or general contractors, as partners to be supplied with solutions from a single source. Over 300 staff work in the areas of development, production, administration and service at the company's headquarters in Bad Salzflun, where they demonstrate the high levels of commitment and innovation that underpin ESSMANN's position as the market leader.

ESSMANN is characterised by high standards that ensure its careful use of energy resources, fulfilment of regulatory requirements and satisfaction of stringent quality demands. It is thanks to these standards that constructors and operators of commercial, administration and industrial buildings both within Europe and beyond have been happy to put their trust in ESSMANN for decades now. For safe and economical flat roof and facade systems, look no further.
