

ESSMANN renovation solutions

Architects, property developers and roofing companies are becoming more and more interested in renovation work. ESSMANN's expertise in this field extends from simple replacements of old or faulty skylight domes right through to full renovation projects. Suitable ESSMANN renovation sets can be produced for skylight domes made by any manufacturer and can be converted at any time to provide daily ventilation.

Existing glass arcade rooflights can also be renovated at widths of up to 6 m and any length at all by installing ESSMANN arcade rooflights. To do this, either ESSMANN surface-mounted bases or bases provided by the customer made of wood, steel or concrete can be used.

Important points to consider for any renovation project:

- A feasibility study must be performed.
- Any problems with statics must be resolved.
- The renovation must be in keeping with the existing architecture.
- A realistic cost/benefit analysis must be carried out.

Over the years, ESSMANN has been able to "save" a number of well-known buildings both at home and abroad; it is also taking a leading role in a number of current projects.
